

# MAXGXL®

## The Glutathione Accelerator

### Purpose

To enhance the natural production of glutathione with an unsurpassed NAC formula.

### Positioning Statement

MaxGXL® is an exclusive blend of ingredients designed to increase glutathione production within the body in order to improve the quality of life for people of all ages.

### General Description

What is glutathione and why is it so important? Glutathione is a small tri-peptide produced naturally in our cells. It functions both as an antioxidant and an antitoxin and is a major defense system against illness and aging. Our glutathione level actually indicates our state of health and can predict longevity.

Beginning around the age of 20 your body's natural production of this powerful little tri-peptide declines about 10 to 15 percent every decade. Various daily impacts such as stress, exercise, infection, injury and environmental toxins also reduce your glutathione levels over time

So how do we help our body get the glutathione it needs? Eating enough glutathione-rich foods only works in an idealized world where stress, deadlines and fast food are not factors. Orally supplementing glutathione is a good idea, but just not practical. The fragile structure of glutathione makes surviving the digestive tract nearly impossible. Science has struggled for decades to find a practical way of getting this vital component to your cells until now.

Until now. MaxGXL contains a proprietary NAC formula that is designed specifically to enable your body to produce optimal amounts of glutathione. It not only contains the specific building blocks of glutathione, but also contains key nutrients that aid in absorption of these building blocks into the body.

### Unique Attributes

- 1- Exclusive formula proven to increase the body's production of glutathione.
- 2- Provides essential nutrients that enable absorption of the critical glutathione forming components.
- 3- Initially created by Dr. Robert Keller after years of research on ways to improve his patients' quality of life.
- 4- Max International® is the proven leader in glutathione research, development and distribution. Our sole product focus is to optimize glutathione production within the body.

### Product Benefits

Increased glutathione has the following benefits:

- Strengthens the immune system\*
- Fights intracellular inflammation\*
- Supports increased exercise\*
- Slows the aging process\*
- Protects individual cells from free radical damage\*
- Acts as the body's primary detoxification mechanism\*

### Supporting Ingredients

**N-Acetyl Cysteine (NAC)**- supports the transport of a very fragile amino acid, L-cysteine through the digestive process making it more bio-available for glutathione production. Cysteine is known as the "rate limiting amino acid" for the production of glutathione and is one of the core ingredients in MaxGXL together with L-glutamine, another glutathione amino acid precursor. In addition, other network antioxidants such as vitamin C and alpha lipoic acid, as well as a dietary flavonoid, quercetin, have been added to provide complementary antioxidant support.

**Cordyceps sinensis**- functions to preserve glutathione based on its known anti-inflammatory properties. Inflammation produces free radicals and other reactive oxygen species that damage cellular components unless they are neutralized by antioxidants such as glutathione. This anti-inflammatory action of cordyceps helps to minimize the use of available glutathione, thus freeing it to perform other important functions within the body.

**N-Acetyl-D-glucosamine**- supports the gastrointestinal absorption of amino acids. It is included in the formula to promote the absorption of N-Acetyl Cysteine and glutamine.

**Glutamine**- L-Glutamine is one of the three amino acids that makes up the tripeptide glutathione. Additionally, L-glutamine is known as an essential nutrient to the cells that line the small intestine.

**Silymarin**- is the active extract from milk thistle comprised of a complex of seven flavonolignans and polyphenols with antioxidant properties. It also works to preserve hepatic glutathione to support a healthy liver.

# MAXGXL®

The Glutathione Accelerator

### Directions for Use

Take three MaxGXL® capsules twice daily with water. Store in a cool, dry place.

### Guarantee/ Warning

This product has been manufactured in the USA in strict conformance with industry standards. Purity and potency guaranteed. Store in a cool, dry place not to exceed 30° C (86° F).

Warning: Keep out of the reach of children. This product is for adult use only. It is not intended for use by young children, pregnant women, or nursing mothers.

### Nutrition Facts

<b>Supplement Facts</b>		
Serving Size 3 Capsules		
Servings Per Container 60		
Amount Per Serving		% Daily Value
Vitamin C (as Calcium Ascorbate USP)	250 mg	417%
L Glutamine	750 mg	*
N-Acetyl Cysteine (NAC)	375 mg	*
Alpha Lipoic Acid	75 mg	*
Proprietary GSH Absorption & Recycling Blend: Cordyceps, N-Acetyl D-Glucosamine, Quercetin, Milk Thistle Extract (Silybum Marianum) 80% Silimarin.	488 mg	*
Other Ingredients: Gelatin Capsules		
*Daily value not established.		

### FAQs

#### Why was MaxGXL developed?

**A-**MaxGXL was developed by Dr. Robert Keller initially as a way to improve the quality of life for his patients.

#### What makes MaxGXL Unique?

**A-**For years, Dr. Keller worked closely with Max International providing critical oversight and direction to refine and improve upon his original formula. MaxGXL uses the highest quality ingredients from proprietary sources to achieve the results that Dr. Keller envisioned for his product. The careful selection of each raw material and the unsurpassed analysis and production of the MaxGXL formula is a highly guarded trade secret owned exclusively by Max International.

#### How does MaxGXL increase glutathione in the body?

**A-**MaxGXL helps to provide an essential building block for glutathione so that your body can manufacture it naturally in the cell.

#### What are free radicals and why are they dangerous?

**A-**Free radicals are highly reactive compounds that are created in our body due to a number of different causes such as diet, exercise, pollutants in the air or in our food, among many other things. Free radicals are neutralized by antioxidants, with glutathione being the most important and powerful antioxidant. When the number of free radicals exceeds the ability of antioxidants to neutralize them, your body enters a state referred to as "oxidative stress." Oxidative stress has been linked to over 74 diseases and disorders. This is why it is so important to support your antioxidant network in your body, especially glutathione, to avoid oxidative stress.
